

# Advanced Polypropylene Carpet Backing Yarns

Delivering Tomorrow's Yarn Solutions – Today

Bonar Yarns has been manufacturing quality PP backing yarns for Axminster & Wilton woven carpets, since 1970. Our commitment to quality and an extended range of products has made Bonar Yarns the Global Market Leader with a worldwide renowned reputation.

Bonar Yarns PP carpet backing products deliver the following benefits to your carpet and to your business:

- **Increased Loom Speed & Efficiency** via stronger yarns than conventional spun yarns & natural fibres, meaning less loom breaks
- **Increased Runnage** with more meters per kilo for your money than conventional spun yarns & natural fibres
- **Reduced Weight** due to PP having a lighter specific gravity, making it an ideal component for aircraft, cruise liners and train carpet
- **Excellent Carpet Stability & Perfect Pattern Repeat** due to exceedingly uniform, stable and consistent yarn characteristics
- **Water and Acid Resistant** making a PP synthetic backed carpet ideal for cruise liner carpets
- **Mould and Fungus Free** due to PP being completely inert
- **Fully Heat Set Yarns** which promote stable and uniform carpet width, essential for the contract carpet market for hotel ballrooms, airports and other large floor areas

Together with these benefits, Bonar Yarns has developed a wide product range of backing yarns, offering you the most appropriate yarn solution for each specific application:

#### **Environmental Sustainable Yarns**

weft yarns made from 100% recycled PP

#### **Flame Retardant Yarns**

for the aircraft, cruise and train flooring market

#### **UV Stabilised Yarns**

for outdoor carpet and rug applications. The UV inhibitor will stop the PP yarn degrading when exposed to Ultra Violet rays.

#### **ISO Certified 9001:2008**

guarantees you a reliable and consistent quality product

# Weave Types

---

## Axminster

## Wilton

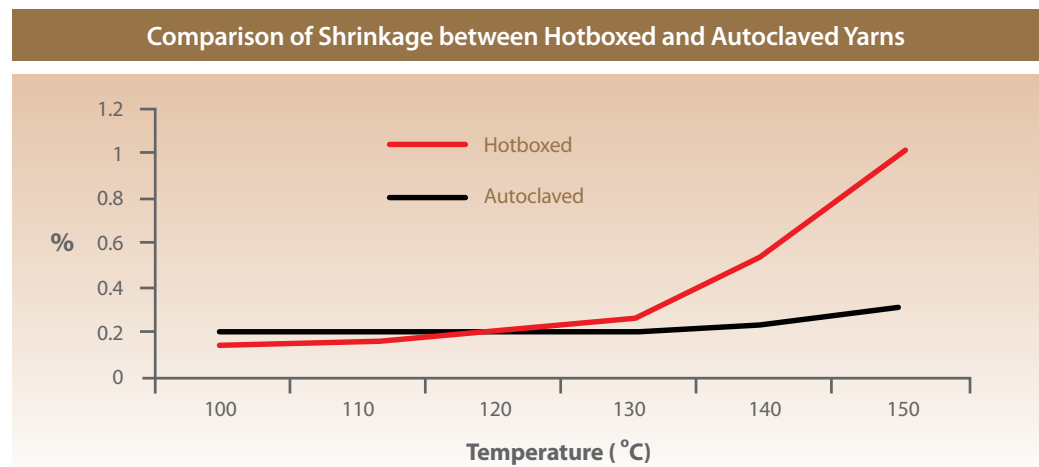

## Bonaweft™

Bonar Yarns polypropylene weft yarns, twisted or untwisted, are made to very tightly controlled shrinkage specifications enabling the carpet to be processed through the latex finishing operation without fear of shrinkage. The uniformity of the yarn ensures smooth running and reduces stoppages caused by yarn breaks. Additionally, Bonar has developed 89 Tex and 105 Tex yarns for the manufacture of high end rugs in excess of 1.5 million knots per m<sup>2</sup>.

| Twisted Quality | Untwisted Quality | Tex | Metric Count | Jute Tex Replacement | Meters per kilo (polypropylene) | Meters per kilo (jute) |
|-----------------|-------------------|-----|--------------|----------------------|---------------------------------|------------------------|
| 12114           |                   | 89  | 11.2         | 207                  | 11,235                          | 4,816                  |
| 1205            | 1105              | 133 | 7.5          | 241                  | 7,518                           | 4,155                  |
| 1209            | 1109              | 200 | 5.0          | 276 - 344            | 5,007                           | 3,628 - 2,911          |
| 1227            |                   | 278 | 3.6          | 412 - 482            | 3,602                           | 2,431 - 2,078          |
| 12165           |                   | 500 | 2.0          | 826                  | 2000                            | 1207                   |
| 12167           |                   | 361 | 2.8          | 482-551              | 2781                            | 2708-1207              |

## Bonaclave™

Bonar Yarns autoclave yarns are steam treated at a temperature of 150°C. The principal benefits are near zero shrinkage on every metre of yarn, twist retention and general stabilisation of yarn configuration, especially for an open weave carpet construction.

## Bonastuffer™

Bonar Yarns polypropylene stuffer warp yarns are specifically made with minimum extension and minimum shrinkage to provide a stable back for all woven carpets. High twist levels ensure better weavability. All Bonar's stuffer warp yarns can be made twist-set for increased beaming efficiency. This extra treatment to the yarn eliminates any remaining twist liveliness.

| Quality | Tex | Metric Count | Twist (per meter) | Jute Tex Replacement | Meters per kilo (polypropylene) | Meters per kilo (jute) |
|---------|-----|--------------|-------------------|----------------------|---------------------------------|------------------------|
| 0604    | 133 | 7.5          | 80                | 210-240              | 7,518                           | 4,430                  |
| 0606    | 156 | 6.4          | 80                | 280                  | 6,410                           | 3,560                  |
| 0648    | 222 | 4.5          | 40                | 413                  | 4552                            | 2414                   |

## Bonachain™

Bonar Yarns twisted chain warp yarns offer considerable savings over cotton spun yarns because of the increased length of yarn per kilo which results in fewer beam changes and better production efficiency.

Polypropylene chain warp yarns are more stable, have less elongation and reduce creep more than polyester blend yarns. This gives a better interlock within the carpet construction.

| Quality | Tex                     | Metric Count | Twist (per metre) | Meters (per kilo) |
|---------|-------------------------|--------------|-------------------|-------------------|
| 0950    | 133                     | 7.50         | 60                | 7,500             |
|         | 3 x 30 Polyester Blends | 11.20        | -                 | 11,000            |
|         | 3 x 37 Polyester Blends | 8.00         | -                 | 8,000             |
|         | 4 x 50 Polyester Blends | 5.00         | -                 | 5,000             |
| 0973    | 133                     | 7.50         | 60                | 7500              |

## Bonaflame®

Bonar Yarns flame retardant yarns meet stringent health and safety requirements and are manufactured under our ISO 9001:2008 Quality Control System. Bonaflame yarns help the finished carpet system meet international FR standards.

They are particularly well suited for specialist areas including the Aircraft & Marine market sectors.

---

## Bonaeco®

Bonar Yarns has developed a recycling program which could have a dramatic impact on the way in which polypropylene carpet backing yarns are produced in the future. Using a dynamic process, Bonar Yarns is producing PP warp and weft yarns made from 100% recycled material that technically meet all tex and shrinkage requirements consistently, so that the quality of the end product is in no way compromised.

In addition to Bonaeco, Bonar's regular range of fibrillated polypropylene yarns are recyclable. In conjunction with polypropylene pile yarn, these carpets can be reprocessed more easily than those with mixed fibre yarns.

Bonar Yarns started weaving production in this building over 100 years ago.  
Today this site continues delivering quality PP backing yarns around the world
